

Jim Harris (LM-1) states that he will be happy to perforate stamps from his two perforators for any member who would like to have them. His perforating device for the JH Perfin (J55.7 in the U. S. Catalog) is home-made, while the device for HAR/RIS is store bought. The latter, made to perforate two stamps at once, is listed as H21.5 and R94.5.

Harris suggests that the perforation be made on a coil strip of three, like the one shown above. Any member interested in taking advantage of his kind offer should send a self-addressed envelope, a coil strip and return postage. He says if you do not affix the return postage to the envelope, he will be glad to perforate that, too.

This is a repeat, for the benefit of newer members, of an offer Harris made seven or eight years ago.

Write to James P. Harris, P. O. Box 3646, Wilmington, NC 28401.
